Superfoods

Get Nutrients from Food, Not Supplements

Different nutrients are vital to various functions of the body. There are health benefits with foods like fruits and vegetables and there are health risks associated with other foods.

Nutrients taken as supplements are not as effective as the synergy of multiple nutrients working together within whole foods. Supplementation and hyper-fortification also make it easy to vastly exceed daily nutrient requirements, which in some cases can lead to toxicity. Mother Nature provides all the nutrients you need in far more appetizing packages.

Skin

Superfoods for your skin are high in vitamins A, C and E. Vitamin A may act as a gentle internal sunscreen, vitamin C is a potent antioxidant that encourages skin cell turnover and supports the formation of collagen, which gives skin elasticity. Vitamin E is an antioxidant that may slow aging and help boost the immune system.

Butternut Squash

Cantaloupe

Collards

Papaya

Red Bell Pepper

Romaine Lettuce

Spinach

Heart

Superfoods for your heart are highest in nutrients such as fiber, folate, potassium and lycopene, which promote heart health. High fiber foods maintain healthy cholesterol levels. Potassium helps maintain normal blood pressure levels. Lycopene can help prevent LDL “bad” cholesterol.

Banana

Blackberries

Cranberries

Raspberries

Spinach

Tomatoes

Watermelon

Eyes

Superfoods for your eyes are highest in vitamin A. Inadequate intake of vitamin A can lead to night blindness, poor vision in dim light and possibly age-related macular degeneration.

Butternut

Carrots

Chicory

Collards

Squash Greens

Pumpkin

Red Leaf Lettuce

Romaine Lettuce

Spinach

Sweet Potato

Brain

Superfoods for the brain are backed by scientific evidence. Foods such as blueberries, strawberries and spinach prevent and reverse age-related brain deficits such as decreased short term memory, loss of balance and coordination.

Blueberries

Spinach

Strawberries

Antioxidant

Antioxidant superfoods are high in direct and/or indirect antioxidants such as vitamin C. They protect against the negative effects of aging and DNA degradation.

Artichokes

Blackberries

Blueberries

Broccoli

Broccoli

Brussel Cabbage

Cabbage

Cauliflower

Sprouts Sprouts

Cranberries Prunes Raisins Raspberries

Joints

Superfoods for your joints are high in bromelain and anthocyanins. Bromelain is an enzyme found in pineapple and researchers believe may reduce inflammation and help injuries heal more smoothly. Anthocyanins found in cherries contain anti-inflammatory properties that may be beneficial in reducing the risk of gout – an inflammatory form of arthritis in joints and toes in particular.

Bones

Superfoods for your bones are high in calcium, vitamin K, folate and magnesium. Calcium is important for strong bones. Folate lowers levels of homocysteine, an amino acid linked to increased risk of fractures. Vitamin K is needed for bone formation and may even reduce the risk of fractures. Magnesium increases bone density.

Arugula

Collards/Kale
Broccoli Chicory Greens

Immunity

Superfoods for your immune system are highest in nutrients such as vitamins A, C and E, which research shows play a role in immune function.

Butternut Squash

Cantaloupe

Collards

Papaya

Red Bell Pepper

Romaine Lettuce

Spinach
